

# How can virtual currencies and smart contracts support a pay-per-wash business model?

Timeline Overview

## November 12-30: Ideation Phase (3 weeks)

During the **Ideation** phase, we will collaboratively work on identifying key opportunities for virtual currencies, micro-payments, and smart contracts to support and stimulate pay-per-wash business models like Bundles.

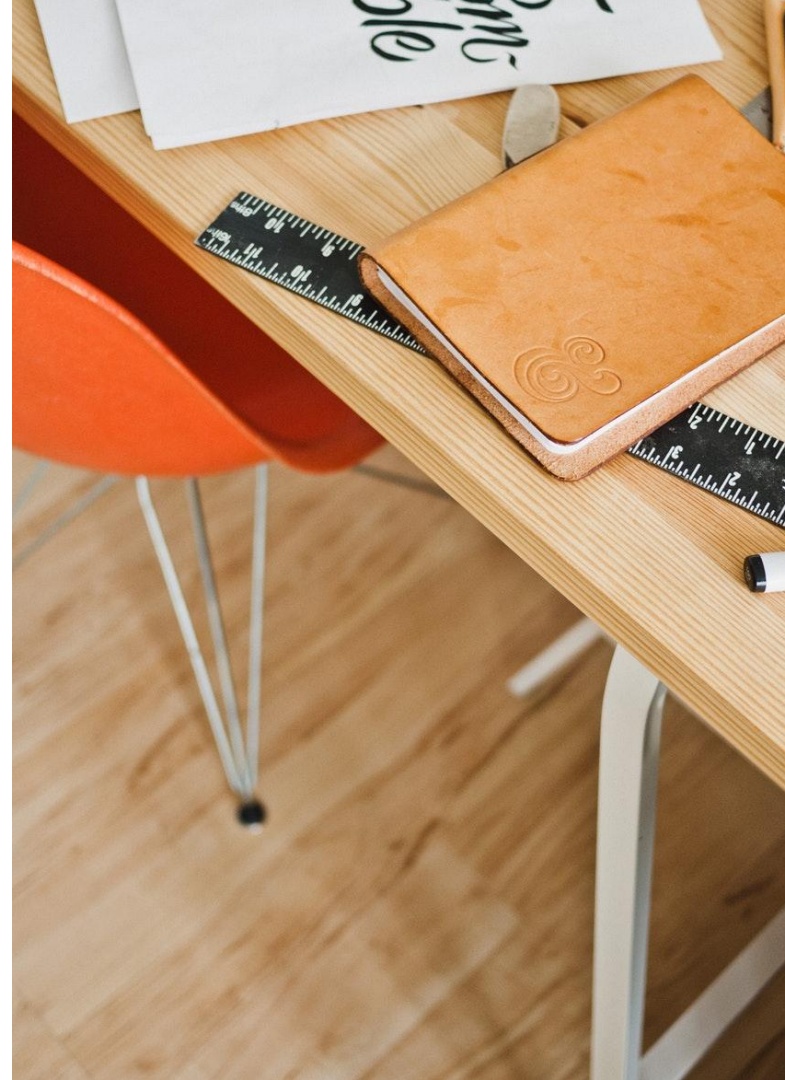

Check out the [Contribution Guide](#) for more information on how to contribute to this phase.

## To Be Announced: Implementation Phase (Ongoing)

The Implementation Phase will bring together all insights crowdsourced online and those of the Community of Practice into a final, open-source whitepaper for all to use, share, and further contribute to. We also encourage all of you to connect with one another and continue or start working on new ideas, and update us on progress so far.
